Data Integration Services

A robust data strategy and architecture with secure, automated, and monitored data pipelines, delivering data and decision-ready information to where it's needed most. Faptic Technology designs and implemented low-code/no-code data orchestration.

Partnering with Faptic Technology on your data strategy, architecture, and system implementation, enables you to get most out of your valuable asset - data, and allows your teams to focus on core business activities.

The Challenge

Without a cohesive data strategy, organisations struggle with data silos, information is isolated and inaccessible across different departments, leading to inefficiencies, duplication of efforts, and missed opportunities for data-driven insights.

The Approach

Faptic Technology's advisors, data architects, business analysts and data engineers will meet you where you are today on your data journey, starting with discovery, right through to data architecture, documentation, integration, test automation and monitoring.

The Benefits

Deep Expertise - the addition of data architects, analysts, data pipeline developers to your in-house teams where improvements data quality, system architecture, quality, cost, and speed is required.

Strategic Focus – instead of responding to data, reporting, and integration related issues, your team can focus on strategic initiatives that drive the product and business forward.

Cost efficiency - when compared with building in-house expertise, cost savings (including permanent FTE costs and specialist training costs) can be made with our Data Integration Service.

Recognised as 15th Best Places to Work in Europe, 2023

We strive to provide a place where engineers and creatives thrive to deliver client value.

Bringing together industry best practice and engineering experience

Each of our experienced engineers have years of experience working across multiple industry sectors, bringing together a breadth of best practice in methodology and technology selection.

Security and Quality in everything we do

Faptic Technology places significant focus on training in security and quality. Developing engineering and delivery methodologies that are agile with security and quality woven into the fabric of design and delivery.

 | Copyright 2024

We meet you where you are today on your data journey, supporting you to develop your strategy, architect modern data platforms, integrate new and legacy system, all while reducing cost, improving quality and customer experience.

We conduct innovation and discovery workshops to understand short- and long-term data objectives, targeting specific issues and producing executable strategies that drive your data roadmap forward.

We will provide highly experienced strategists, architects, business analysts and data engineers, with a proven methodology, to work alongside your data and product teams.

Our expertise

We provide cross-industry, expertise that can plan, re-develop, and create entirely new modern data platforms and integrated systems:

- Data Integration Architecture (range of technologies)
- Data Ware Housing (Snowflake, DataBricks, Dataverse)
- Data Integration Engineering (ELT, SQL, Snaplogic, Matillion)
- Engagement Managers, Scrum Masters, Analysts
- Cloud Engineering/DevOps (AWS, AZURE)

Benefits of working with Faptic Technology

Enabling you to meet project, product, and platform delivery timelines.

Exploiting the combined pool of knowledge and engineering experience of Faptic Technology.

Enabling your engineering focus to be on strategic delivery of new products, data, cloud and security.

Utilising our experts' guidance to support your business case for changing how you deliver products.

Global Talent

Faptic Technology operates delivery centres across South America, Eastern Europe, and India, providing a range of engineering skills that fit the investment profile of many organisations.

Cross Industry

Our key differentiator is our wide-ranging engineering experience, which has matured over many years to a level that we now provide services across industries.

Our Mission

Faptic Technology is an award-winning transformation partner specializing in Software/AI, Data/AI, Cloud Security and Business Change.

Since 2008 Faptic Technology has been serving blue chip organisations across Financial Services, Life Sciences and Information Technology.

Our purpose is to create agility; to provide our clients with on-demand access to deep expertise and knowledge across a broad range of technologies, whilst delivering the best technical and business solutions.
